PAVING CONSTRUCTION PROJECT GUIDE

CALL NOW 847-336-2700

WWW.TOTALPAVING.COM

DAY 1: DEMO & BASE PREPARATION:

- Prior to our arrival, please be sure to remove any parked vehicles on the driveway or vehicles in the garage that will be needed during the construction process and park on the street away from the front of the property to allow space for equipment to maneuver.
- Also, please move any sports equipment, sprinkler heads near the work area to avoid them getting damaged, mark pet fences, and restraint pets securely.
- Upon arrival the crew will remove the existing surface of the driveway, install the new stone base, grade, leave it compacted and ready for inspection with the local village or city as required.
- In most cases, after the base is prepared, the driveway will be accessible for parking

DAY 2: INSPECTIONS:

- After base preparation, we will schedule any required base inspections.
- Once inspection is passed, we will schedule the project pavement installation date which normally is between 1-3 days after the base has been readie, weather permitting.
- Most villages do not require for anyone to be present during inspection, but do require
 the permit to be visibly posted on a front window or door as well as approved plans
 to be accessible if needed.
- Some Villages do not require a base inspection, we will advise if one is not needed. If such is the case we will schedule paving sooner availability.

DAY 3 +: PAVEMENT INSTALLATION:

- The pavement installation crew will complete the driveway by pouring the asphalt and/or concrete or to complete the hardscape work and leave it tied-off to traffic.
- During construction, please contact your local police department for street parking permission.

ASPHALT DRIVEWAYS:

Remain off the driveway for a minimum of 48 hours after it has been completed.

BRICK INSTALLATIONS:

Available for use immediately after.

• **CONCRETE INSTALLATIONS:**

Allow 7 days after pouring for concrete to cure before placing any vehicular weight.

• SEAL COATING & ALL SEALANT APPLICATIONS:

Remain off for minimum 24 hours. Shaded areas may need additional wait times.

- Due to the nature of our industry, we remind customers that dates given may change or vary due to the following unexpected events:
- Weather conditions
- Other delayed projects
- Equipment Downtime

Notice: We do our absolute best to communicate changes to you as soon as we know. Dates requested off from work are at customer discretion only due to the unpredictability of the above variables.

Our main stream of communication is email, please expect to receive project updates, invoices, and receipts this way. If concerns arise during construction or after the project has been completed, please contact us by email or phone. Please include pictures and clear description of concerns for project managers to review.
